1. TITLE

Webpage Styling with External CSS3, Fieldsets, Navigation Bar & Custom Styling

2. AIM

To structure and style a multi-section webpage using internal/external CSS3 styles, navigation bars, fieldset groupings, button cursor states, and responsive forms.

3. OBJECTIVE

The objectives of this experiment are:

- To group related content sections using fieldset and legend elements.
- To style navigation bar with background colors and padding.
- To configure custom CSS classes (.features, .newstyle) with background colors.
- To design interactive contact forms with tel, email, and submit controls.

4. THEORY

CSS selectors target HTML elements, classes, and IDs. Fieldsets logically group form/content fields with descriptive legend titles.

Application Flow:

HTML Elements -> CSS ID & Class Selectors -> Navbar Styling -> Fieldset Containers -> Rendered Layout

5. ALGORITHM / PROCEDURE

1. Create HTML&CSS.html with header, navbar table, and fieldset sections.
2. Define CSS rules for body background, #navbar, .features, and .newstyle.
3. Group sections into fieldsets for Home, Articles, About, and Contact Us.
4. Add branch list and contact form input controls.
5. Verify styling in browser.

6. PROGRAM

HTML&CSS.html
